TITLE : CONTAINER

ABSTRACT : PROBLEM TO BE SOLVED: To separate a cover from a container body with a relatively weak force without using a tool such as nippers or a device such as a coin and without providing a special device for separation on the cover.

SOLUTION: In the container equipped with a cover 9 surrounding a spray stem 7 and a nozzle button 17 for pressing the spray stem 7, the cover 9 and the nozzle button 17 are associated with each other so that the cover 9 is pulled in a direction of removing from a container body 1 by operating the nozzle button 17 in a specific direction. A part of a fitting portion 13 of the cover 9 is equipped with a fitting cancel portion 25 so that fitting of the fitting portion 13 with the container body 1 may be canceled by operating the nozzle button 17 in the specific direction, while a display for operating the nozzle button 17 in a specific direction is provided.
